

Engineering Report

Date: March 18, 2015

Crew Engineer Name: Mehdi Scoubeau

Diesel – 77%

Propane – 56%

Gasoline – 2 gallons in tank

Water (trailer) – unknown status (tank has been removed)

Water (static) – distance from top: 40 cm

Trailer to Static Pump used - no

Water (loft) – 33 gallons

Static to Loft Pump used – yes

Summary of Engineering activities:

- I prepared the EVA of tomorrow by cleaning the helmets and the headsets/micros.

- On main generator

- Internet connection via WiFi

- HALpr on

Questions and Concerns to Mission Support:

- Some pages (“record eva plan” and “explore possible eva routes”, for example) on HALpr do not seem to be available because of a “internal server error”.

- The trailer tank has been taken away.

- The ventilation seems noisier than it was on our arrival. Should I change the air filter?
