Dear Earth,

Last EVA today was aimed at doing the last tests of range for the NorCal rover and the radio repeater. The last measurements for the opacity experiment were also recorded. The sky was amazing for our last EVA and it was a pleasure to share that moment with two of my crewmembers.

Cleaning and packing can be done quickly and efficiently if you work together in a musical and cheerful atmosphere. And this is exactly what we did. We are now ready to hand the Station over to crew 165 tomorrow.

Tomorrow morning at 5 am, the crew will wake up in order to enjoy the view of the night sky of Utah and use the telescope one last time. A beautiful sunrise on the desert is also awaiting us as well as a fresh breeze... or at least this is how we picture it.

See you tomorrow, Earth.
